

Assignment PDF Content

Assignment Title

AWS Cloud Networking and EC2 Deployment

Objective

Create and configure AWS networking components and deploy EC2 instances successfully.

Demonstrate understanding of VPC, Subnets, Route Tables, Internet Gateway, Security Groups, EC2 Launch, and VPC Peering using screenshots and explanations.

Tasks To Perform

1. Create two VPCs with different CIDR blocks.

2. Create subnets inside both VPCs.

3. Create and attach Internet Gateway.

4. Configure Route Tables.

5. Associate subnets with Route Tables.

6. Launch EC2 instances in both VPCs.

7. Configure Security Groups.

8. Enable public internet access.

9. Create VPC Peering connection.

10. Update route tables for peering.

11. Verify connectivity between instances.

12. Provide screenshots for every step.

13. Include terminal verification commands.

Submission Requirements

- Submit PDF report
- Include screenshots for every step
- Include AWS console outputs
- Include terminal verification
- Mention student name and roll number

Evaluation Criteria

VPC Configuration	- 20 Marks
Subnet & Routing	- 20 Marks
EC2 Deployment	- 20 Marks
VPC Peering	- 20 Marks
Documentation/Screenshots	- 20 Marks
